REASONS FOR ALLOWANCE

The instant invention is deemed to be directed to an unobvious improvement over the invention patented in U. S. Patent No. 3,203,183 to Lucien. The improvement comprises an electro-hydrostatic failsafe actuator with an accumulator pump that is immersed in the reservoir, the accumulator pump contained in a failsafe flow circuit for delivering pressurized fluid contained in the reservoir to a trip accumulator and a solenoid actuated trip valve mounted in the failsafe circuit, the trip valve being connected to one of the cylinder chambers by a trip line, the trip valve being closed when in an energized condition and opened when in a de-energized condition whereby pressurized fluid in the accumulator is delivered into the one chamber to move the piston rod to a desired position for the purposes of providing a compact electrically operated linear actuator that integrates all controls and components to provide rapid and efficient heat dissipation and cooling to all heat producing parts.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

PRIOR ART

The patent to Lucien is cited for the showing of an electro-hydraulic failsafe actuator similar to applicant's but lacking an accumulator pump and solenoid trip valve.

Prior art made of record but not relied upon is considered pertinent to Applicant's disclosure and consists of four patents.

Art Unit: 3745

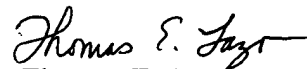

Demerjian et al. (5,950,427), Palmer (5,577,532), Van Den Bossche et al. (6,625,982), and Grebe (2,631,431) are cited to show electro-hydraulic failsafe actuators.
